GLI Systems Inc. wins international green building industry award for outstanding achievement in environmental sustainability.

The Green Building Pages recognizes GLI Systems and their RainTube product as a leader at the forefront of the green building industry with outstanding achievements in both environmental and social sustainability.

Jacksonville, OR, November 7, 2007: GLI Systems, manufacturer of the RainTube Gutter Protection System has been awarded the 2007 Green Building Pages Benchmark Sustainability award for Outstanding Achievement in Environmental and Social Sustainability. The award was presented at the US Green Building Council "GreenBuild Expo" in Chicago—the worlds largest building products exposition focused on sustainable, eco-friendly building products and methods.. RainTube and nine other products were recognized for exemplary performance according to the Green Building Pages rigorous Benchmarking Sustainability evaluation criteria. The Green Building Pages is a leading building products certification organization that provides consumer, architects and building contractors with internet-based guides and resources supporting sustainable building design and information about green building products. Green Building, an ecologically sound method of construction has become a major area of interest and concern among consumers and the building industry worldwide. The Green Building Pages certification database, which is consistent with the American Society for Testing and Materials (ASTM) and the Sustainable Materials Rating Technology (SMART) criteria, placed RainTube in a leadership position among the sustainable building products of some of the nation's leading manufacturers. Use of RainTube can help generate LEEDS points for builders seeking "green" certification of their projects.

*more*

RainTube is an effective, low-cost, gutter protection system made in the USA from 100% post-consumer recycled materials. RainTube helps protect homes, apartments and commercial buildings from water damage caused by clogged gutters, reduces fire risk from gutter debris in compliance with new fire prevention building codes, reduces maintenance and promotes clean and efficient operation of rain water harvesting systems.

Steve Spratt, co-founder of GLI, said "We are very proud to be recognized at the GreenBuild Exposition with this important award. The fact that we are the only "green" product in the gutter protection industry is a source of great satisfaction to everyone in our company and meeting the high criteria of the Benchmark Sustainability Award set a standard we will continue to emphasize in all our business operations". Spratt went on to note "Green Building standards are a new measure of overall life quality and they are increasingly important to consumers today. It is gratifying that RainTube has been recognized for making its contribution to the planet while helping homeowners preserve the value of their buildings."
